UVSE: Set rows, cols

Eingaeph

November 6, 2018

1 Directory UVSE

Here are the functions used to query the screen for the number of its rows and the number of its columns. Function uvset.c is called each time the display is to be rewritten.

2 Testing UVSE

Following is a listing of main.cold, which tests the functions introduced in directory UVSE.

```
1 #include "../libk.h"
2
3 int main(void)
4 {
5
6 //   enter/leave raw mode when calling uvset.c
7 //   otherwise the terminal writes to screen (echoing)
8 //   when sending the information about the screen size
9 //   to standard input.
10
11     enableRawMode(); uvset(); disableRawMode(); return 0;
12     screenTest();
13
14     return 0;
15 }
```

3 Conclusion

Functions uvset.c and setWindow.c were successfully tested.
